

MESOTHERAPY

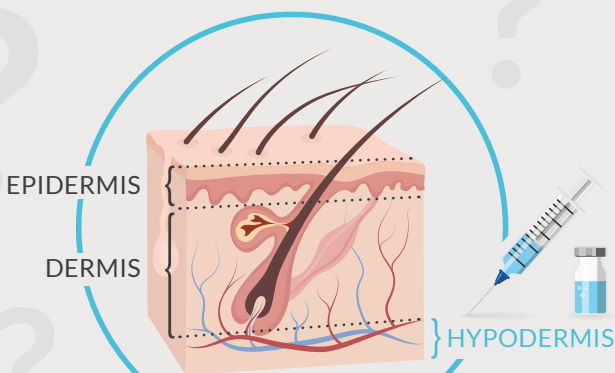

A PRECISE AND PAINLESS
LOCAL TREATMENT

WHAT IS MESOTHERAPY?

Mesotherapy consists in an injection of active products under the dermis, thanks to a very thin needle.

The DERMATIC® uses compressed air, which offers the practitioner a very high precision and a high injection speed for a painless treatment.

IN ORDER TO ENSURE A PAINLESS TREATMENT, WE HAVE DEVELOPED THE DERMATIC® GUN, A TOOL COMBINING PRECISION AND EFFICIENCY FOR MESOTHERAPY.

IN WHICH CASE CAN I NEED IT ?

This technique is mainly used for:

- aesthetic procedures (mesolift, cellulite),
- dermatological procedures (fibrous scars, hair loss),
- rheumatology type pains, spinal pathologies,
- sports traumas (tendonitis, pulled muscle)
- blood circulation troubles...

HOW IS A MESOTHERAPY SESSION CONDUCTED?

Your doctor makes several injections of active products directly on or around the areas to be treated.

The number of injections required, as well as the number of sessions, will depend on the disease to be treated and the strategy of your doctor:

- For example, for sports injuries: 1 to 3 sessions may be sufficient.
- For chronic diseases: 10 to 15 sessions over several months or even a year may be necessary.

WHAT ARE THE MAIN ADVANTAGES OF THIS TECHNIQUE WITH DERMATIC®?

By directly targeting the area to be treated:

the quantity of active products used is significantly reduced and goes straight to the area to be treated, the treatment is then much faster. The advantages of the DERMATIC® gun are:

- Comfort
- Painless treatment thanks to the use of compressed air (high injection speed) and very thin needles
- Consistent safety
- Uniform distribution of the active product (ensured reproducibility)

Euromi S.A. is a Belgian company specialized in the manufacturing and the distribution of medical aesthetics products, plastic surgery and dermatological equipment. Founded in 1990, the company has been developing its experience in this sector for 25 years. The company is active worldwide in 50 countries mostly through distributors and is constantly seeking for new markets to enter. It is ISO: 13485 certified. Euromi S.A. offers its products while always targeting the same goal: the safety of the patients and the total satisfaction of the customer.
